PVC Flange Spray Shields

PVC Flange Spray Shields are a reliable and very cost effective option for protecting personnel, plant and equipment from the dangers of leaking pipework.

Designed for low to moderate pressures, temperatures and chemical aggressiveness these bright yellow flange wraps are available in a complete range of sizes. They are used in applications where temperatures reach no higher than 75°C and include a replaceable pH leak indicator pad that's retained in a clear PVC pouch.

AG's PVC flange spray shield are manufactured from 3-ply reinforced PVC and exhibit outstanding UV and weather resistance, good chemical resistance and are non conductive.

PTFE Flange Spray Shields

When extra protection is required for a higher temperature connection, or one that is sealing more aggressive media, PTFE Flange Spray Shields are an excellent choice.

PTFE Flange Spray Shields are made to suit all flange sizes and are used in environments up to 230°C. Manufactured from PTFE Coated Glass Cloth with a transparent PTFE central strip for spotting leaks, AG's PTFE Flange Spray Shields exhibit excellent UV and weathering resistance.

The high grade of chemical resistant PTFE used in their construction is inherently flame resistant, tear resistant, non-conductive and does not support the growth of mould or mildew.

Flange Spray Shields

Designed to provide an extra layer of protection for personnel, plant and equipment, AG's flange spray shields are an economical and essential safety tool.

These easy-to-install flange protectors are fastened tightly around the exterior of a flanged connection and provide an extra layer of protection against leaks of dangerous chemical media.

The two styles of flange spray shields described on this page represent the two most popular forms available. Both our PVC and PTFE flange spray shields are available to suit all standard flange sizes (including ANSI, BS and Australian standards) and can also be custom-made to match non-standard flanges.

For even more demanding applications, AG can also produce higher temperature / pressure resistant covers. Our comprehensive range of raw materials enables us to offer the exact combination of materials required while our in-house fabrication facilities means that your custom made solution can be fabricated quickly and precisely.

For more information on the full range of options available please don't hesitate to contact your local AG branch.
