An inexpensive, yet highly durable form of rubber sheet with excellent impact resistance, acoustic and vibration deadening properties.

Often used as impact resistant flooring, floor safety sheeting, acoustic underlays or anti vibration pads our Reconstituted Rubber can be supplied in sheets or cut to suit your application requirements.

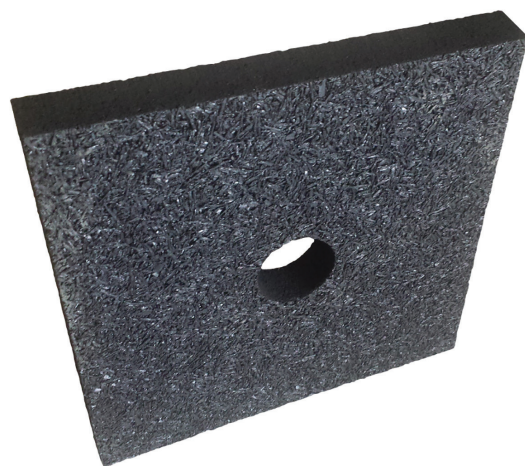

Because Reconstituted Rubber Sheet is produced from recycled rubber fibres, it is not only economical but also very environmentally friendly. It is also very long lasting and displays good wear resistance and durability. This material is weather resistant and used in both indoor and outdoor installations.

When used for flooring, Reconstituted Rubber Sheet offers good anti-slip properties and is soft enough to help break a fall. This recycled rubber sheet can also be easily cleaned and requires very little maintenance.

It is permeable to water but will dry quickly to return to its natural state (we experience this every time we water cut the material).

As a sound proofing material, Reconstituted Rubber Sheet is particularly effective when used to deaden any noise generated from repeated impacts / drop-zones.

The most commonly stocked (and requested) colour is black.

Standrd Sizes	
Standard Thicknesses:	15mm, 22mm, 43mm
Maximum Sheet Size:	500mm Wide x 1000mm Long
