## Res-I-Glas Banding Tape

The original glass banding tape, Res-I-Glas Banding Tape is known for its high quality, superior strength and consistent performance. Offering superior tensile strength, durability, ease of application and insulation performance, Res-I-Glas Banding Tapes are widely used all around the world.

Constructed of high tensile electrical grade glass yarns laid parallel and bonded with fully catalysed thermosetting resins, Res-I-Glas Banding Tapes utilise the entire strength of the glass. This results in a high tensile, high modulus, low elongation, high impact strength band that offers superior performance and durability.

Because Res-I-Glas Banding Tape is itself an insulation, it removes the need for an underlying insulation pad and eliminates the insulation creepage problems that are often associated wire steel wire banding.

Res-I-Glas Banding Tapes are available from AG in a range of different styles, lengths and widths. Our standard grade exhibits excellent thermal endurance and is widely used on motors up to and including Class H Plus (220°C).

Other grades of Res-I-Glas Banding Tape (for lower temperature applications, with increased resin content or for high humidity, high temperature environments) are also available upon request.

### Available Widths

Standard widths of Res-I-Glas Banding Tape include:

3.2mm	19mm
4.8mm	25.4mm
6.4mm	38.1mm
9.5mm	50.8mm
12.5mm	76.2mm

Of these, 6.4mm, 19mm and 25.4mm are the most commonly requested and are subsequently held in the largest variety of lengths (19mm is readily available in 200yrd, 1000rd and 2000yrd rolls).

Custom widths and lengths can also be supplied upon request.

For more information on the full range of sizes and styles available, or to discuss our Res-I-Glas Banding Tapes' suitability for your application, please don't hesitate to contact your local AG branch.
