

Weicon Contact Primer for Polyolefins

**Cyanoacrylate
Adhesives /
Superglues**

**Primers &
Enhances**

**Dispensing
Equipment**

**Adhesives &
Sealants**

Without pre-treatment, many plastics are unable to be bonded or can only be bonded under very specific conditions.

Weicon Contact Adhesive Primer for Polyolefins helps alleviate this problem by changing the surface structure of these plastics.

Specifically designed to enable the use of Weicon Cyanoacrylate Contact Adhesives with polyolefins such as polyethylene (PE) and polypropylene (PP), Weicon Contact Adhesive Primer also works well with thermoplastic elastomers (TPE) Teflon® (PTFE) and related plastics as well as silicone.

When working with these kinds of materials, the use of Weicon Contact Adhesive Primer for Polyolefins offers many advantages. These include:

- Larger choice of usable plastics
- Higher bonding strength with plastics that are usually difficult to bond
- Cost savings as other mechanical methods of pre-treatment (scalping, low pressure plasma, heat treatment, etc...) are not necessary.

Weicon CA Primer is compatible with our entire range of Weicon Cyanoacrylate Super Glues.

Standard Sizes

- 10ml Bottle
- 100ml Bottle
